**DETAILED ACTION**

1. Receipt is acknowledged of the amendment filed on May 29, 2007, which has been fully considered in this action.
2. The indicated allowability of claims 18-28 is withdrawn in view of the reference to Beekman. Rejections based on the reference follow.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
4. Claims 18-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beekman.

Beekman discloses an applicator comprising a tube 14 with a passage 36 formed of material constructed and arranged to be attracted to an outside surface 10, which can be releasably affixed to the outside surface, except for the combination with a container. As to the container note that the tube is used with an air hose, therefore, the tube of Beekman is capable of being attracted to a container such as an air compressor having an outside surface and an interior. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the applicator of Beekman with a container such as an air compressor since such containers(i.e. air compressors) are well known to be used with air hoses and would be capable

of having the tube releasably affixed to the outside surface when a machinist wants to rest the hose.

As to claims 24, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have the tube of Beekman constructed of a flexible magnetic material, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. In re Leshin, 125 USPQ 416. A flexible magnetic material would facilitate maneuverability.

#### ***Response to Arguments***

5. Applicant's arguments with respect to claims 18-28 have been considered but are moot in view of the new grounds of rejection.

#### ***Conclusion***
